

Mercedes Roof Controller 93926

Please be aware that when refitting this unit you need to follow a setup procedure:

- Disconnect the battery negative terminal.
- Install the module and reconnect the battery with the ignition off.
- Get in and close all doors and turn the ignition on.
- Press and hold the left and right front power window switches in the down position until the door windows are in the fully-opened position. Continue to hold the windows switches for 5 seconds after all window movement has ceased.
- Press and hold the left and right front power window switches in the up position until the door windows are in the fully-closed position. Continue to hold the window switches for 5 seconds after all window movement has ceased.

If this procedure is not carried out properly, the soft-top light will come on intermittently and the power soft top will stop in the mid travel during the opening sequence.

The controllers can be corrupted by low battery voltage or by jump-starting the car. Please ensure battery is full charged before installing controller.

Damaged caused by low battery voltage, jump starting, and/or not following this procedure is not covered under the warranty.
